

Final Inspection of Installers after Installation

Ensure that we left a properly installed system behind before leaving the customer's house:

- ❑ Ensure that the installation area is clean and organized (free of grass, objects, dirt, etc.)
- ❑ Check that the water level is correct.
- ❑ Close the main gas valve
- ❑ Close filter cup properly (all three clips) to prevent gas leakage, and ensure that the stickers have been removed.
- ❑ Check that the inlet and outlet pipes are properly installed.
- ❑ Ensure that the stabilizing wires are properly positioned.
- ❑ Check that all bands are tightened and straight
- ❑ Check that the gas pipe is cut straight to prevent gas leakage.
- ❑ Count the sandbags in the gas bag. ensuring that one or two bags are properly filled with 1.2 kg of sand.
- ❑ Check that discharge water valve is closed.
- ❑ Check that the stove button is turned off.
- ❑ Passing over gas piping, make sure there are no kinks/ that the piping is stretched by gravity to a low point
- ❑ Make sure that no equipment or tools have been left on-site.
