

General use for Bio-toilet system

Daily use:

Please make sure not to exceed the number of flushes permitted per day, according to the type of system you have:

HBG2 = 25 flushes per day

HBG4 = 50 flushes per day

HBG7 = 75 flushes per day

Do not dispose of toilet paper, wet wipes, and hygiene products in the toilet.

The pump must be locked after every use by turning the handle counterclockwise. The handle must be kept locked. Wait two hours before the next use.

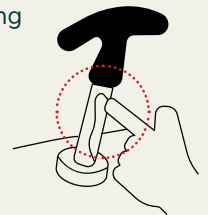

Toilet cleaning:

The toilet must be cleaned with ecological products, or vinegar only. Use of chemicals may disturb the balance of bacteria and affect the system's performance.

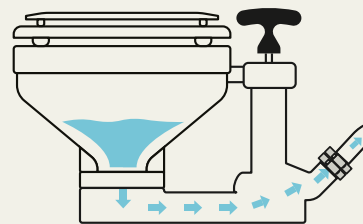

Required maintenance once a month:

Lubricate the bar of the handle using silicone grease, lower and raise the handle at least once to lubricate the entire bar. (Silicone grease is supplied with the product).

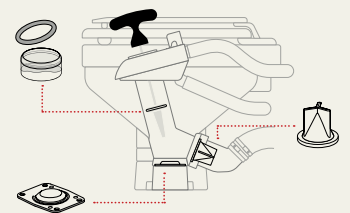

Remove/flush all contents from the toilet bowl. Pour in two cups of vinegar 5%. Flush using the handle – raise and lower the handle after use.

Required maintenance every 6 months:

The three main gaskets must be replaced. For additional information, refer to the attached manual pages 23–26.
